

## MODERN TRANSISTOR CLASSIC SERIES

**MTC** transistor microphones feature a special design circuit technology that has never been used in microphones. The microphones have an integrated power supply that makes them far superior to the conventionally phantom-powered transistor microphones.

For longer signal levels and due to the very high output level they can be connected to the converter directly and without a preamp. It will surprise many users and musicians that the **CARDINAL DVM MTC12** sounds pretty much like a tube microphone: very brilliant, dynamic, musical and detailed.

### **CARDINAL DVM DS MTC12 Transistor Microphone**

The **MTC12** is a modern transistor microphone with high adjustment. This makes it an outstanding and straightforward universal microphone for vocals, speech and instruments.

The **MTC12** has a fantastic price-performance ratio and is sure to become one of the most popular transistor microphones available on the market.

### **CARDINAL DVM DS MTC47 Transistor Microphone**

The **MTC47** has the same special circuit as the **MTC12**. It is an excellent microphone for vocals and announcers and preferably suitable for male voices and a great number of instruments (e.g. drums).

<b>ORDER-NO.</b>	<b>VERSION</b>	<b>DIMENSIONS (LxØxH)</b>	<b>WEIGHT</b>
