

## SMALL MICROPHONES

### CARDINAL DVM DS SDT1 Small Membrane Microphone

The **CARDINAL DVM DS SDT1** transistor small membrane microphone combines the warm and expressive sound character of old tube classics with the high resolution of modern transistor technology. A special circuit design with the shortest possible signal path is implemented here as well. The **SDT1** with a cardioid capsule offers the best results for almost all types of instrumental recordings, i.e. drums overhead, guitar recordings, piano, etc.

The characteristics untypical for a small membrane microphone also make it an excellent choice for vocal recordings. In practical use it has already made a lot of significantly more expensive large membrane microphones look very small.

The capsule on the **SDT1** small membrane microphone can be removed by undoing the screw connection and replacing it with a spherical or cardioid capsule. A pressure sphere attachment (see accessories) that adds an exceptionally interesting sound variation to the capsule cage is also available.

ORDER- NO.	VERSION	DIMENSIONS (LxØxH)	WEIGHT
DVM- SDT1	Small microphone	97 x 21 x 81 mm	83 g
DVM- DKUGEL	Pressure sphere attachment		14 g
