

STAX - SRS-007 / SRS-717

SRS-717

SRS-007

Without a doubt a top model. The SR-007 OMEGA II headset is the ultimate in precision and power. A deep bass and dynamic rendition with very high linearity. The robust metal casing prevents vibration. The new clip system ensures very comfortable wearing comfort.

The rotating ear cushions can be precisely adapted to different head shapes. For an amplifier you can either choose the SRM-007t, basically constructed the same as the SRM-006t, but with 4 tubes for the output level, resulting in a higher output performance, yet lower in distortion with an even more extensive frequency range.

The alternative is the SRM-717, a fully balanced Class A transistor amplifier, offering the highest possible output performance and precision. The SRM-717 only has one input, but offers cinch and balanced XLR sockets.

ORDER-NO.
