

CONNECT Series Digital

DS328T / DS328R

The CONNECT Series DS328T transmitter along with the DS328R receiver provides a complete digital snake solution.

It features 32 analog inputs on stage to analog outputs at FOH and 8 analog returns from FOH to analog outputs on stage via a single CAT-5 cable.

Gain and 48V phantom power are manually controlled at the stagebox - no computer required.

Additional DS328R receivers can be added to the system for providing splits to multiple locations.
