

## SAT-1 Headphone Satellite Box

---

[Click Here For Larger Size Picture](#)

This compact, rugged box lets listeners and performers adjust their own headphone volume. In fact, two sets of listeners can independently set their stereo headphone levels or achieve separate mixes of two mono sources.

By sending the mix minus signal down one line and a vocalist's direct out down the other, the performer has the freedom to set their own level in the monitor mix with precision.

- Two independent sections, each with concentric left/right volume controls and stereo/mono switches
- Sealed 2-Watt audio taper pots provide reliability and precise level control
- Daisy-chain multiple boxes with ordinary mic cables (MK-4 Series)
- Cold-rolled steel construction and a roll-bar style handle protect it from studio abuse
- Optional SATCLIP accessory provides for mounting on a mic stand
