

SoundChecks

Lets you hear while protecting you from loud damaging noise.

You have to try these to believe them!

Live Sound • Concerts • Manufacturing

Warehouses • Sporting Events

Machinery (mowers, chainsaws, etc.) • Shooting Ranges

Whirlwind **SoundChecks** apply approximately 30dB of attenuation over the entire audio spectrum. Sonically tuned chambers act as an extension of the ear canal preventing the occlusion effect that occurs with traditional earplugs so that sound is uniformly reduced.

In other words, you hear everything you need to while your ears are protected from high sound pressure levels.

Pro Quality Performance

- High noise reduction across all frequencies
- No distortion of sound
- Blocks harmful noise but allows speech and other useful sounds to be heard

Comfortable and Secure

- Lightweight (less than 2 ounces!)
- Adjustable head band
- Comfortable for extended use

Increased Safety

- High speech intelligibility
- Hear shouts or warning signals
- No need to remove hearing protection to have a conversation

Convenient

- Folds for easy storage in shirt pocket
- Drops around the neck while not in use
